

Recitation Instructor (circle one): Moe Larry Curly Groucho Chico Harpo

Class time (circle one): 10:30 11:30

**QUIZ #5**

- 1) A force does  $-6.0$  J of work on a system as it moves first  $4.0$  cm in the x-direction and then  $6.0$  cm in the y-direction. If the x-component of the force is  $100$  N, what is its y-component?

- 2) A  $10$  kg box slides down a  $20^\circ$  incline and then compresses a spring  $10$  cm before stopping for an instant. The spring constant is  $8500$  N/m. The initial speed of the box was  $2.0$  m/s. How much work was done by gravity as the box slid down the incline?

- 3) The top spring is stretched by  $10$  cm, the bottom is compressed by  $10$  cm and the mass is at rest. The springs are otherwise identical. If an additional identical spring is placed at the bottom and the mass is again found to be at rest, how much higher is its position?
