

Physics 780.20: Assignment #4

Since most of you have already done the bulk of the usual Assignment #4 in class (it was just to finish up some sections from Sessions 9 and 10), we'll skip those to allow more time for your projects. The only remaining Assignment #4 task is to send me a progress report, as described below. Note: Your projects will be due by midnight on Thursday, June 5. It is recommended that you turn in something earlier to get feedback while there's time for corrections.

1. Please send email to furnstahl.1@osu.edu by May 19 with a (brief!) progress report on your project. In particular, include a description of your project goal and a list of possible subgoals. Subgoals are things like: write a test code, convert a code from a different language, do an error analysis, etc. The project for 780.20 can be a piece of a bigger project (that doesn't have to be completed this quarter) or can be self-contained. You are free to adjust the project goal and subgoals as you proceed, but I want to have a rough idea where you're heading before it's due!
