I Introduction to Numerical Methods in Physics	1
1 Introduction	3
1.1 Choice of programming language	4
1.2 Designing programs	5
2 Introduction to C/C++ and Fortran 90/95	7
2.1 Getting started	7
2.1.1 Representation of integer numbers	12
2.2 Real numbers and numerical precision	15
2.2.1 Representation of real numbers	17
2.2.2 Further examples	26
2.3 Loss of precision	28
2.3.1 Machine numbers	28
2.3.2 Floating-point error analysis	29
2.4 Additional features of C/C++ and Fortran 90/95	30
2.4.1 Operators in C/C++	30
2.4.2 Pointers and arrays in C/C++	32
2.4.3 Macros in C/C++	34
2.4.4 Structures in C/C++ and TYPE in Fortran 90/95	35
3 Numerical differentiation	39
3.1 Introduction	39
3.2 Numerical differentiation	39
3.2.1 The second derivative of e^x	42
3.2.2 Error analysis	52
3.3 Richardson's deferred extrapolation method	55
3.4 How to make figures with Gnuplot	56
4 Linear algebra	59
4.1 Introduction	59
4.2 Mathematical intermezzo	59
4.3 Programming details	63
4.3.1 Declaration of fixed-sized vectors and matrices	64
4.3.2 Runtime declarations of vectors and matrices in C/C++	65
4.3.3 Matrix operations and C/C++ and Fortran 90/95 features of matrix handling	69
4.4 Linear Systems	74

Contents

4.4.1 Gaussian elimination	76
4.4.2 LU decomposition of a matrix	79
4.4.3 Solution of linear systems of equations	83
4.4.4 Inverse of a matrix and the determinant	85
4.4.5 Tridiagonal systems of linear equations	89
4.5 Debugging of codes	91
5 Non-linear equations and roots of polynomials	93
5.1 Introduction	93
5.2 Iteration methods	94
5.3 Bisection method	96
5.4 Newton-Raphson's method	97
5.5 The secant method and other methods	100
5.5.1 Calling the various functions	102
6 Numerical interpolation, extrapolation and fitting of data	103
6.1 Introduction	103
6.2 Interpolation and extrapolation	103
6.2.1 Polynomial interpolation and extrapolation	103
6.3 Qubic spline interpolation	106
7 Numerical integration	109
7.1 Introduction	109
7.2 Equal step methods	109
7.3 Gaussian quadrature	113
7.3.1 Orthogonal polynomials, Legendre	115
7.3.2 Mesh points and weights with orthogonal polynomials	117
7.3.3 Application to the case $N = 2$	119
7.3.4 General integration intervals for Gauss-Legendre	120
7.3.5 Other orthogonal polynomials	120
7.3.6 Applications to selected integrals	122
7.4 Treatment of singular Integrals	124
7.5 Integral equations	127
8 Outline of the Monte-Carlo strategy	129
8.1 Introduction	129
8.1.1 First illustration of the use of Monte-Carlo methods, crude integration	131
8.1.2 Second illustration, particles in a box	135
8.1.3 Radioactive decay	137
8.1.4 Program example for radioactive decay of one type of nucleus	138
8.1.5 Physics Project: Decay of ^{210}Bi and ^{210}Po	139
8.1.6 Brief summary	140
8.2 Probability distribution functions	141
8.2.1 Multivariable Expectation Values	142
8.2.2 The central limit theorem	144
8.3 Random numbers	145
8.3.1 Properties of selected random number generators	148

Contents

8.4	Improved Monte Carlo integration	151
8.4.1	Change of variables	152
8.4.2	Importance sampling	156
8.4.3	Acceptance-Rejection method	157
8.5	Monte Carlo integration of multidimensional integrals	158
8.5.1	Brute force integration	159
8.5.2	Importance sampling	160
9	Random walks and the Metropolis algorithm	163
9.1	Motivation	163
9.2	Diffusion equation and random walks	164
9.2.1	Diffusion equation	164
9.2.2	Random walks	167
9.3	Microscopic derivation of the diffusion equation	170
9.3.1	Discretized diffusion equation and Markov chains	171
9.3.2	Continuous equations	174
9.3.3	Numerical simulation	176
9.4	Entropy and Equilibrium Features	178
9.5	The Metropolis algorithm and detailed balance	181
9.6	Physics project: simulation of the Boltzmann distribution	183
9.7	Physics project: Random Walk in two dimensions	185
10	Monte Carlo methods in statistical physics	187
10.1	Review of Statistical Physics	187
10.1.1	Microcanonical Ensemble	187
10.1.2	Canonical Ensemble	189
10.1.3	Grand Canonical and Pressure Canonical	190
10.2	Ising model and phase transitions in magnetic systems	191
10.2.1	Theoretical background	191
10.2.2	Phase Transitions	199
10.3	The Metropolis algorithm and the two-dimensional Ising Model	200
10.4	Selected results for the Ising model	206
10.4.1	Physics Project: Thermalization and the One-Dimensional Ising Model	209
10.4.2	Physics project: simulation of the two-dimensional Ising model	210
10.4.3	Physics project: Potts Model	211
11	Quantum Monte Carlo methods	213
11.1	Introduction	213
11.2	Postulates in Quantum Mechanics	214
11.2.1	Mathematical Properties of the Wave Functions	214
11.2.2	Important Postulates	215
11.3	First Encounter with the Variational Monte Carlo Method	216
11.4	Variational Monte Carlo for quantum mechanical systems	218
11.4.1	First illustration of variational Monte Carlo methods, the one-dimensional harmonic oscillator	220
11.4.2	The hydrogen Atom	222
11.4.3	Metropolis sampling for the hydrogen atom and the harmonic oscillator	226
11.4.4	The helium atom	229

Contents

11.4.5	Program example for atomic systems	233
11.4.6	Physics Projects: Studies of light Atoms	238
11.4.7	Physics Projects: Ground state of He, Be and Ne	240
11.5	Simulation of molecular systems	241
11.5.1	The H_2^+ molecule	241
11.5.2	Physics Project: the H_2 molecule	243
11.6	Many-body systems	244
11.6.1	Physics Project: Bose-Einstein condensation	244
11.6.2	Physics Project: Liquid 4He	246
12	Eigensystems	249
12.1	Introduction	249
12.2	Eigenvalue problems	249
12.2.1	Similarity transformations	250
12.2.2	Jacobi's method	251
12.2.3	Diagonalization through the Householder's method for tri-diagonalization	252
12.3	Schrödinger's equation (SE) through diagonalization	254
12.4	Physics projects: Bound states in momentum space	260
13	Differential equations	265
13.1	Introduction	265
13.2	Ordinary differential equations (ODE)	265
13.3	Finite difference methods	267
13.3.1	Improvements to Euler's algorithm, higher-order methods	268
13.4	More on finite difference methods, Runge-Kutta methods	269
13.5	Physics examples	270
13.5.1	Ideal harmonic oscillations	270
13.5.2	Damping of harmonic oscillations and external forces	276
13.5.3	The pendulum, a nonlinear differential equation	278
13.5.4	Spinning magnet	280
13.6	Physics Project: the pendulum	280
13.6.1	Analytic results for the pendulum	280
13.6.2	The pendulum code	285
13.7	Physics Project: studies of neutron stars	289
13.7.1	The equations for a neutron star	289
13.7.2	Equilibrium equations	290
13.7.3	Dimensionless equations	291
13.8	Physics project: Period doubling and chaos	293
14	Two point boundary value problems.	295
14.1	Introduction	295
14.2	Schrödinger equation	295
14.3	Numerov's method	296
14.4	Schrödinger equation for a spherical box potential	297
14.4.1	Analysis of $u(\rho)$ at $\rho = 0$	297
14.4.2	Analysis of $u(\rho)$ for $\rho \rightarrow \infty$	297
14.5	Numerical procedure	298

Contents

14.6	Algorithm for solving Schrödinger's equation	298
15	Partial differential equations	301
15.1	Introduction	301
15.2	Diffusion equation	302
15.2.1	Explicit scheme	303
15.2.2	Implicit scheme	305
15.2.3	Crank-Nicolson scheme	306
15.3	Laplace's and Poisson's equations	307
15.4	Wave equation in two dimensions	310
15.5	Physics Projects, One-dimensional Diffusion Equation	312
II	Advanced topics	315
16	Hydrodynamic Models	317
17	Advanced Variational Monte Carlo Methods	319
17.1	Importance Sampling Techniques	319
17.2	Energy and Variance Optimization Techniques	319
18	Diffusion and Green's Function Monte Carlo Methods	321
18.1	Introduction to Green's Functions	321
18.2	Diffusion Monte Carlo	321
18.3	Green's Function Monte Carlo	323
18.4	Other Quantum Monte Carlo Techniques and Systems	323
19	Stochastic methods in other Fields	325
20	Modelling Phase Transitions in Statistical Physics	327
20.1	Methods to classify phase transition	327
20.1.1	The histogram method	327
20.1.2	Multi-histogram method	327
20.2	Renormalization Group Approach	327
21	Finite Element Method	329
22	Large-Scale Diagonalization Techniques	331
23	Quantum Information Theory and Quantum Algorithms	333
A	Classes, templates and modules	335
A.1	Introduction	335
A.2	A first encounter, the vector class	335
A.3	Classes and templates in C++	340
A.4	Using Blitz++ with vectors and matrices	341
A.5	Building new classes	341
A.6	MODULE and TYPE declarations in Fortran 90/95	341
A.7	Object orienting in Fortran 90/95	341

Contents

A.8	An example of use of classes in C++ and Modules in Fortran 90/95	341
B	Parallelization Techniques and High Performance Computing	343
