

# Contents

<b>I</b>	<b>Introduction to Numerical Methods in Physics</b>	<b>1</b>
<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Choice of programming language . . . . .	5
1.2	Designing programs . . . . .	6
<b>2</b>	<b>Introduction to C++ and Fortran</b>	<b>9</b>
2.1	Introduction . . . . .	9
2.2	Getting started . . . . .	9
2.2.1	Scientific hello world . . . . .	12
2.3	Representation of integer numbers . . . . .	16
2.3.1	Fortran codes . . . . .	18
2.3.2	Python codes . . . . .	19
2.4	Real numbers and numerical precision . . . . .	20
2.4.1	Representation of real numbers . . . . .	21
2.4.2	Machine numbers . . . . .	22
2.5	Programming examples on loss of precision and round-off errors . . . . .	25
2.5.1	Algorithms for $e^{-x}$ . . . . .	25
2.5.2	Fortran codes . . . . .	28
2.5.3	Further examples . . . . .	31
2.6	Additional features of C++ and Fortran . . . . .	34
2.6.1	Operators in C++ . . . . .	34
2.6.2	Pointers and arrays in C++. . . . .	35
2.6.3	Macros in C++ . . . . .	37
2.6.4	Structures in C++ and TYPE in Fortran . . . . .	39
2.7	Exercises and projects . . . . .	40
<b>3</b>	<b>Numerical differentiation</b>	<b>45</b>
3.1	Introduction . . . . .	45
3.2	Numerical differentiation . . . . .	45
3.2.1	The second derivative of $e^x$ . . . . .	49
3.2.2	Error analysis . . . . .	59
3.3	Exercises and projects . . . . .	62
<b>4</b>	<b>Linear algebra</b>	<b>63</b>
4.1	Introduction . . . . .	63
4.2	Mathematical intermezzo . . . . .	64

4.3	Programming details . . . . .	67
4.3.1	Declaration of fixed-sized vectors and matrices . . . . .	68
4.3.2	Runtime declarations of vectors and matrices in C++ . . . . .	69
4.3.3	Matrix operations and C++ and Fortran features of matrix handling . . . . .	74
4.4	Linear Systems . . . . .	78
4.4.1	Gaussian elimination . . . . .	80
4.4.2	LU decomposition of a matrix . . . . .	83
4.4.3	Solution of linear systems of equations . . . . .	87
4.4.4	Inverse of a matrix and the determinant . . . . .	89
4.4.5	Tridiagonal systems of linear equations . . . . .	94
4.5	Exercises and projects . . . . .	96
<b>5</b>	<b>Non-linear equations and roots of polynomials</b>	<b>105</b>
5.1	Introduction . . . . .	105
5.2	Iteration methods . . . . .	106
5.3	Bisection method . . . . .	108
5.4	Newton-Raphson's method . . . . .	110
5.5	The secant method and other methods . . . . .	113
5.6	Exercises and projects . . . . .	115
<b>6</b>	<b>Numerical interpolation, extrapolation and fitting of data</b>	<b>117</b>
6.1	Introduction . . . . .	117
6.2	Interpolation and extrapolation . . . . .	117
6.2.1	Polynomial interpolation and extrapolation . . . . .	117
6.3	Richardson's deferred extrapolation method . . . . .	120
6.4	Cubic spline interpolation . . . . .	121
<b>7</b>	<b>Numerical integration</b>	<b>125</b>
7.1	Introduction . . . . .	125
7.2	Newton-Cotes quadrature: equal step methods . . . . .	125
7.3	Adaptive integration . . . . .	132
7.4	Gaussian quadrature . . . . .	133
7.4.1	Orthogonal polynomials, Legendre . . . . .	136
7.4.2	Integration points and weights with orthogonal polynomials . . . . .	138
7.4.3	Application to the case $N = 2$ . . . . .	140
7.4.4	General integration intervals for Gauss-Legendre . . . . .	142
7.4.5	Other orthogonal polynomials . . . . .	142
7.4.6	Applications to selected integrals . . . . .	144
7.5	Treatment of singular Integrals . . . . .	146
7.6	Scattering equation and principal value integrals . . . . .	149
7.7	Parallel computing . . . . .	151
7.7.1	Brief survey of supercomputing concepts and terminologies . . . . .	151
7.7.2	Parallelism . . . . .	152
7.7.3	MPI with simple examples . . . . .	154
7.7.4	Numerical integration with MPI . . . . .	159

<b>8</b>	<b>Outline of the Monte Carlo strategy</b>	<b>165</b>
8.1	Introduction . . . . .	165
8.1.1	Definitions . . . . .	167
8.1.2	First illustration of the use of Monte-Carlo methods, crude integration . . . . .	170
8.1.3	Second illustration, particles in a box . . . . .	174
8.1.4	Radioactive decay . . . . .	176
8.1.5	Program example for radioactive decay of one type of nucleus . . . . .	177
8.1.6	Brief summary . . . . .	179
8.2	Probability distribution functions . . . . .	179
8.2.1	Multivariable Expectation Values . . . . .	183
8.2.2	The central limit theorem . . . . .	189
8.3	Random numbers . . . . .	191
8.3.1	Properties of selected random number generators . . . . .	194
8.4	Improved Monte Carlo integration . . . . .	196
8.4.1	Change of variables . . . . .	197
8.4.2	Importance sampling . . . . .	201
8.4.3	Acceptance-Rejection method . . . . .	203
8.5	Monte Carlo integration of multidimensional integrals . . . . .	203
8.5.1	Brute force integration . . . . .	205
8.5.2	Importance sampling . . . . .	206
8.6	Exercises and projects . . . . .	208
<b>9</b>	<b>Random walks and the Metropolis algorithm</b>	<b>211</b>
9.1	Motivation . . . . .	211
9.2	Diffusion equation and random walks . . . . .	212
9.2.1	Diffusion equation . . . . .	212
9.2.2	Random walks . . . . .	214
9.3	Microscopic derivation of the diffusion equation . . . . .	218
9.3.1	Discretized diffusion equation and Markov chains . . . . .	220
9.3.2	Continuous equations . . . . .	225
9.3.3	ESKC equation and the Fokker-Planck equation . . . . .	226
9.3.4	Numerical simulation . . . . .	226
9.4	Entropy and Equilibrium Features . . . . .	228
9.5	The Metropolis algorithm and detailed balance . . . . .	231
9.5.1	Brief summary . . . . .	235
9.6	Exercises and projects . . . . .	236
<b>10</b>	<b>Monte Carlo methods in statistical physics</b>	<b>239</b>
10.1	Introduction and motivation . . . . .	239
10.2	Review of Statistical Physics . . . . .	241
10.2.1	Microcanonical Ensemble . . . . .	242
10.2.2	Canonical Ensemble . . . . .	243
10.2.3	Grand Canonical and Pressure Canonical . . . . .	244
10.3	Ising model and phase transitions in magnetic systems . . . . .	245
10.3.1	Theoretical background . . . . .	245
10.4	Phase Transitions and critical phenomena . . . . .	254
10.4.1	The Ising model and phase transitions . . . . .	255

10.4.2	Critical exponents and phase transitions from mean-field models . . . . .	257
10.5	The Metropolis algorithm and the two-dimensional Ising Model . . . . .	259
10.5.1	Parallelization of the Ising model . . . . .	266
10.6	Selected results for the Ising model . . . . .	268
10.7	Correlation functions and further analysis of the Ising model . . . . .	271
10.7.1	Thermalization . . . . .	271
10.7.2	Time-correlation functions . . . . .	275
10.8	The Potts' model . . . . .	277
10.9	Exercises and projects . . . . .	279
<b>11</b>	<b>Quantum Monte Carlo methods</b>	<b>283</b>
11.1	Introduction . . . . .	283
11.2	Postulates of Quantum Mechanics . . . . .	284
11.2.1	Mathematical Properties of the Wave Functions . . . . .	284
11.2.2	Important Postulates . . . . .	285
11.3	First Encounter with the Variational Monte Carlo Method . . . . .	287
11.4	Variational Monte Carlo for quantum mechanical systems . . . . .	288
11.4.1	First illustration of variational Monte Carlo methods . . . . .	290
11.5	Variational Monte Carlo for atoms . . . . .	293
11.5.1	The Born-Oppenheimer Approximation . . . . .	293
11.5.2	The hydrogen Atom . . . . .	294
11.5.3	Metropolis sampling for the hydrogen atom and the harmonic oscillator . . . . .	300
11.5.4	The helium atom . . . . .	303
11.5.5	Program example for atomic systems . . . . .	308
11.5.6	Helium and beyond . . . . .	314
11.6	The $H_2^+$ molecule . . . . .	316
11.7	Improved variational calculations . . . . .	318
11.7.1	Importance sampling . . . . .	318
11.7.2	Guiding Functions . . . . .	320
11.7.3	Energy and Variance Minimization . . . . .	321
11.7.4	Correlated Sampling . . . . .	322
11.8	Exercises and projects . . . . .	322
<b>12</b>	<b>Eigensystems</b>	<b>327</b>
12.1	Introduction . . . . .	327
12.2	Eigenvalue problems . . . . .	327
12.3	Similarity transformations . . . . .	328
12.4	Jacobi's method . . . . .	329
12.5	Diagonalization through the Householder's method for tridiagonalization . . . . .	332
12.5.1	The Householder's method for tridiagonalization . . . . .	333
12.5.2	Diagonalization of a tridiagonal matrix via Francis' algorithm . . . . .	334
12.6	The QR algorithm for finding eigenvalues . . . . .	336
12.7	Schrödinger's equation through diagonalization . . . . .	336
12.7.1	Numerical solution of the Schrödinger equation by diagonalization . . . . .	338
12.7.2	Program example and results for the one-dimensional harmonic oscillator . . . . .	339
12.8	Discussion of BLAS and LAPACK functionalities . . . . .	344
12.9	Exercises and projects . . . . .	344

<b>13</b>	<b>Differential equations</b>	<b>351</b>
13.1	Introduction	351
13.2	Ordinary differential equations	352
13.3	Finite difference methods	353
13.3.1	Improvements of Euler’s algorithm, higher-order methods	355
13.3.2	Predictor-Corrector methods	356
13.4	More on finite difference methods, Runge-Kutta methods	357
13.5	Adaptive Runge-Kutta and multistep methods	359
13.6	Physics examples	360
13.6.1	Ideal harmonic oscillations	360
13.6.2	Damping of harmonic oscillations and external forces	365
13.6.3	The pendulum, a nonlinear differential equation	367
13.6.4	Spinning magnet	369
13.7	Physics Project: the pendulum	370
13.7.1	Analytic results for the pendulum	370
13.7.2	The pendulum code	373
13.8	Exercises and projects	378
13.8.1	Equilibrium equations	384
<b>14</b>	<b>Two point boundary value problems</b>	<b>391</b>
14.1	Introduction	391
14.2	Shooting methods	392
14.2.1	Improved approximation to the second derivative, Numerov’s method	392
14.2.2	Wave equation with constant acceleration	394
14.2.3	Schrödinger equation for spherical potentials	398
14.3	Numerical procedure, shooting and matching	399
14.3.1	Algorithm for solving Schrödinger’s equation	400
14.4	Green’s function approach	402
14.5	Projects and exercises	406
<b>15</b>	<b>Partial differential equations</b>	<b>409</b>
15.1	Introduction	409
15.2	Diffusion equation	411
15.2.1	Explicit scheme	412
15.2.2	Implicit scheme	416
15.2.3	Crank-Nicolson scheme	419
15.2.4	Numerical truncation	420
15.2.5	Analytic solution for the one-dimensional diffusion equation	421
15.3	Laplace’s and Poisson’s equations	423
15.3.1	Jacobi Algorithm for solving Laplace’s equation	425
15.4	Wave equation in two dimensions	426
15.4.1	Analytic solution	428
15.5	Exercises and projects	430

<b>II</b>	<b>Advanced topics</b>	<b>437</b>
16	Many-body approaches to studies of atoms and molecules: Hartree-Fock theory	439
17	Density functional theory	441
18	Many-body methods for Bose-Einstein condensation	443
19	Quantum Information Theory and Quantum Algorithms	445
<b>III</b>	<b>Programs and additional notes on C++, MPI and Fortran 90/95</b>	<b>447</b>
<b>A</b>	<b>Additional C++, Python and Fortran programming features</b>	<b>449</b>
A.1	The Complex class . . . . .	450
A.2	The vector class . . . . .	459
A.3	Modules in Fortran . . . . .	464
A.4	How to make figures with Gnuplot . . . . .	468
